

Vibe Coding to Agentic Coding

The Modern AI Development Journey

Today, anyone can build software.

The question is no longer: "Can you code?"

The question is: "**Can you effectively direct AI to build software?**"

The AI Coding Landscape

Your Growth Path

01 Lovable

Learn to build apps

02 Bolt / Rocket / Genspark

Build larger applications

03 Claude Code / Codex

Work with AI coding agents

04 Cursor / Windsurf

Professional & Enterprise Development

05 OpenCode + OpenDesign + Ollama

Open Source & Full Ownership

Each Stage Builds On The Previous One

Level 1: Learn to build apps

Level 2: Build larger applications

Level 3: Work with AI coding agents

Level 4: Professional & Enterprise Development

Level 5: Open Source & Full Ownership

Today's Focus

Level 1 — Lovable

We are only covering the first step today.

Goal By the end of this session you will have:

- ✓ Built your own SaaS application
- ✓ Deployed it
- ✓ Understood the building blocks of modern software
- ✓ Understood where to go next

01

Why Start With Lovable?

Traditionally, building software required:

- ✗ Frontend Development
- ✗ Backend Development
- ✗ Authentication
- ✗ Database Setup
- ✗ Security
- ✗ Hosting
- ✗ Payments
- ✗ SEO
- ✗ AI Integrations

Months of work.

Today:

One prompt.

One platform.

**One working
application.**

What Makes Lovable Powerful?

Lovable combines multiple technologies into a single platform.

Application Layer

- ✓ UI Generation
- ✓ Business Logic

Data Layer

- ✓ Database
- ✓ SQL Queries
- ✓ File Storage

User Layer

- ✓ Authentication
- ✓ User Management

AI Layer

- ✓ AI Integrations
- ✓ AI Features

Business Layer

- ✓ Payments
- ✓ Emails

Growth Layer

- ✓ SEO
- ✓ AI Search Optimization

Security Layer

- ✓ User Permissions
- ✓ Security Controls

Instead of learning 10 tools... You learn one platform first.

Today's Activity

Build A **Multi-User Kanban Task Manager**

✓ User Signup

✓ Personal Dashboard

✓ In Progress Tasks

✓ Completed Tasks

✓ User Login

✓ Todo Tasks

✓ On Hold Tasks

✓ Database Storage

Every user sees only their own tasks.

📁 Full Prompt Available In GitHub

→ **LIVE BUILD**

What Did We Just Build?

In less than 20 minutes:

✓ **Authentication**

✓ **Users**

✓ **Database**

✓ **Kanban Board**

✓ **Security**

✓ **SaaS Architecture**

Most people assume this requires
a development team.

**You just built it
with a prompt.**

What Else Can Lovable Do?

Analytics

Understand user behavior

AI

Add AI features without complex setup

Emails

Send branded emails

Database

Store application data

Authentication

Manage users

Storage

Store files and documents

Secrets

Manage API keys securely

SQL

Query data directly

Payments

Monetize your applications

Security

Protect customer data

SEO & AI Search

Get discovered online

Example Progression

The technology remains the same. Only the use case changes.

Your Next Step In The Journey

Today

Lovable *(Build Apps)*

← **YOU
ARE HERE**

Next

Bolt / Rocket *(Build Bigger Apps)*

Then

Claude Code / Codex *(Build With Agents)*

Then

Cursor / Windsurf *(Professional Development)*

Finally

OpenCode + OpenDesign + Ollama *(Open Source Ownership)*

Today's Outcome: You built your first application. Now you understand how modern AI software development works. **Welcome to Vibe Coding.**
