

ACCOUNT SETUP

Connecting Google Services with N8N

Why Account Setup

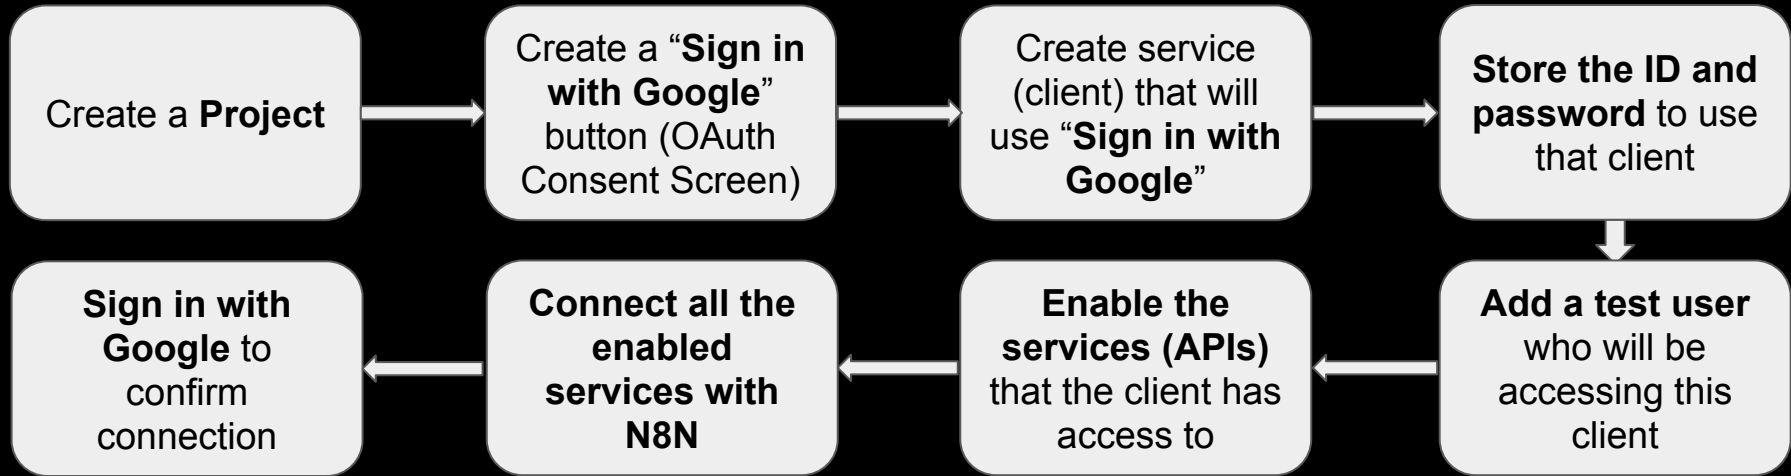

- Google Services are the easiest to use to share and collaborate with data.
- When you want n8n to read or write data from your Google account, like updating a spreadsheet or sending an email, it needs a special kind of permission.
- This is set up through something called an OAuth connection, which involves creating a secure link between your Google account and your n8n workspace.
- Today we are going to connect our google services with n8n

IMPORTANT

- Doing all the steps in the described procedure is crucial and missing steps will lead to errors.
- Google gives you an ID and a password to connect all the services but **the password can be viewed and copied only once**.
- A sheet with relevant steps and sections will be provided. Please make a copy of the sheet and store all the required data in the sheet for future reference.
- All links shown in the presentation will be shared in the session

THE PROCESS

- Google's Service Integration procedure includes a step of very secure steps in the following order

THE SHEET

- Please make a copy of the sheet. The link will be provided in the chat.
- <https://docs.google.com/spreadsheets/d/10EFGweWpHPnV65jbPscCgbfITfGo7Us3M41xVke33t0/edit?gid=1402825708#gid=1402825708>

Step 1 - Navigating to GCP

- GCP - Google Cloud Platform - <https://console.cloud.google.com/>

Step 2 - Creating a project

- Click on **dismiss** on the top right
- Click on “**Select a project**” besides google cloud on the top left
- In the window that opens, click on “**New Project**” on the top right
- Give the name as “**N8N Project**”
- Leave the location to “**No Organization**”
- Click on “**Create**”

Step 3 - OAuth Consent screen

- Click on the three lines on the top left - **Navigation Menu**
- Bring your cursor to the “**APIs and Services**”
- In the menu that opens, click on “**OAuth Consent Screen**”
- Click on “**Get Started**”
- Give the app name as “**N8N**” and select your email from the dropdown. Make sure it is the same email whose google services you want to use in N8N. Click on next
- Select “**External**” then next, type the same email ID again and click next
- Select the checkbox, click on continue and then create
- Your OAuth Client is created

Step 4 - OAuth Client

- Click on **“Create OAuth client”**
- Select **“Web application”** from the background
- Give the client name as **“N8N”**
- Add a **“Authorized Re-direct URL”** -
<https://aiaa1.datasciencemasterminds.com/rest/oauth2-credential/callback>
- This URL connects google cloud with n8n and hence it does not matter if you have different email IDs for GCP and N8N
- Click on **“Create”** and **store the Client ID and Client Secret (Password) in the Google Sheet (Cell B30 and B31)**

Step 5 - Test User

- Go to the “**Audience**” Section above the currently selected “Clients” section in the menu on the left side
- Scroll down to the “**test user**” section and click on “**add users**”
- Add the same **email ID** you have been using so far and click on save twice
- Scroll up to “**Publishing Status**” and select “**Publish app**”

Step 6 - Enable APIs

- Go to the three lines on the top left (**navigation menu**)
- Bring your cursor to “**APIs and services**”
- Click on “**Library**”
- Scroll down till you see “**Google Workspace**” and click on “**View all (30)**”
- Right click and open in a new tab the services on the next slide

Step 6 - Enable APIs

- Google People API
- Google Tasks API
- Gmail API
- Google Drive API
- Google Calendar API
- Google Docs API
- Google Sheets API
- Google Slides API
- Now move to each tab and **enable** all of them

Step 7 - Head over to N8N

- Head over to - <https://aiaa1.datasciencemasterminds.com/>
- Select **“Credentials”** from the menu at the top
- Click on **“Create Credentials”** on the top right
- Search for the API - **“Google Contacts API”** and click on **“Continue”**.
- **Enter the Client ID and the Client Secret** from the sheet into the respective fields, rename the credentials
- Click on **“Sign in with Google”**
- Choose your account, click on **“Continue”**, **“Select all”**, and **“Continue”**

Common Errors

- **invalid_client**
 - Remove “http://” before the client ID. It should start with a number
- **Error: Client Authorization failed**
 - Extra space or incomplete client secret is pasted
- **redirect_url_mismatch**
 - Redirect URL is blank or incorrect
- **Access denied**
 - Test user is not added

Google Gemini API Key

- Go to - <https://aistudio.google.com/app/api-keys>
- If you see a key
 - Copy the key from the right side using the copy api key button
- If you don't see a key
 - Click on **"Create API Key"**, give it a name (N8N), click on the dropdown in the **"Select a Cloud Project"**, then click on **"Import Project"**.
 - Select the project you created in the gcp setup and click on **"Import"**
 - Select the project and click on **"Create Key"**

Adding Google Gemini API Key

- Open N8N - <https://aiaa1.datasciencemasterminds.com/>
- Go to Credentials, and click on “**Create Credentials**” on the top right
- Search for Gemini and select “**Google Gemini(PaLM) Api**”
- Paste the key, rename the credential and click on “**Save**”
- Search for Gemini and select “**Gemini API Credentials**”
- Paste the key, rename the credential and click on “**Save**”
